

Educating Gen Alpha

By  Nicola Cooper

21 Jan 2020

In today's society, the youth are ageing at a faster rate than ever before. But are our educational facilitators ready for this, or are they in need of a reboot?

Nicola Cooper is a trend researcher, analyst and cultural strategist at Nicola Cooper & Associates (NC&A), as well as in-house trend research at 99c advertising and communications agency.

Gen Alpha's are society's youngest. Following on from Gen Zs are the pre-schooler and kindergarteners of today. And [according to McCrindle](#), there are 2.5 million Gen Alpha's born around the globe each week.

According to a survey carried out by British company [Bullguard](#):

“ The leading cause of Gen Alpha's early development was technology, including access to digital devices, Facebook and Google. The proliferation of these tools has allowed children to quickly absorb a wealth of knowledge that was

unavailable to previous generations. ”

As children are ‘growing older’ younger, this means that the youths’ needs are increasing, and constantly changing in terms of their age-specific requirements – including faster education and larger rates of intellectually stimulating content with which to engage.

Say hello to Generation Alpha

Sean Sullivan 26 Sep 2019

Outsmart their parents by age 8

South Africa, as with most developing countries, has an overwhelmingly youthful population. The Joe Public ‘[Generation Fluid](#)’ [White Paper](#) states:

“ According to the most recent estimates, it is noteworthy that close to half of the country’s total population (i.e.: a segment totaling around 27 million people) falls within the age bracket of 0-24 years. ”

Statistics SA says around 17 million, or a third of the South African population, are below the age of 14.

Around 17 million are children (0-14 years), making up close to a third of SA’s total population.

Population age structure by single years, 2019

With such a large youth population, a key question is to ask is whether we are critically assessing educational formats, methodology, content or studies for the generation whose experience has vastly altered, due to the introduction of the internet and advancing technology.

Are educational institutions adapting at a pace aligned to the needs and intellectual capacity of the youngest generation, whose technological dexterity is undeniable — a generation that will [reportedly](#), “outsmart their parents by the age of 8”?

Mommy's little cyborg: Meet Generation Alpha

Bronwyn Williams 11 May 2018

“Generation Alpha will be the most formally educated generation ever, the most technology-supplied generation ever and, globally, the wealthiest generation ever,” says [McCrindle](#), in an article titled ‘Why We Named Them Gen Alpha’.

Digitally native does not mean digitally exclusive

Though Gen Alphas are digitally native, they’re not digitally exclusive. In the most recent *Sunday Times Next Gen Awards*, respondents listed

God, family and parents as the top things they could not live without in 2019, with social media, internet and television sitting in the 8th, 9th and 10th slots respectively.

Why is this?

#STGenNext19: ALL THE WINNERS!

14 Jun 2019

Well, unlike for the generations before them; internet, social media and television have always been there. It’s a given, it is expected rather than a new exciting development or innovation.

As Gen Alpha engage with tech intuitively, they absorb and consume information and entertainment at a rapid tempo. Simultaneously, they are learning soft skills at an unprecedented rate: problem-solving, multi-tasking and quick thinking.

To engage with these bright young minds, we will need to offer them an opportunity to be able to seamlessly manoeuvre across the digital and the physical worlds. They also want to see consistency across those experiences.

They want to work to save the planet

As a result of their upbringing, awareness and a technological world that knows no geographical boundaries, 59% of Gen Alphas would like to work somewhere saving lives, 51% want a job where they can use technology to make a difference and echoing the rallying cry of Gen Z climate activists such as Greta Thunberg, 67% of 6- to 9-year-olds say that saving the planet will be the focus of their career.

That's according to the [Wunderman Thompson Commerce Report](#).

Keep disrupting: advancing role of tech in education

30 May 2019

Given this, and considering factors such as automation, urbanisation and an older population, we have a fairly clear picture of what the job market will look like in the next 10 years and beyond.

A [recent study](#) by the Foundation for Young Australians (FYA) found that nearly 60 percent of young people in Australia are currently training for careers that will be two-thirds automated in the next 10 to 15 years.

Don't panic. Generation Alpha will still want free chicken-wings

Andrew Whitehouse, Dentsu 16 Oct 2018

The study lists cashiers, bank tellers, textile workers, taxi/Uber drivers, pilots and telemarketers, amongst many others, as those that will inevitably be replaced by automation, AI or further technological advancement.

If our recent bank and taxi strikes are anything to go by, South Africa is not removed from the impact of advancement or replacement.

Jobs that will be displaced by new tech in the next decade

A 2019 report by McKinsey & Company, as [quoted by Business Tech](#), states:

“ Against the 4.5 million potential new jobs created, we estimate that these technologies could displace 3.3 million existing jobs by 2030. ”

. It further states that some “jobs in these roles will, therefore, not be completely replaced – but they might decline in number, as fewer people are required to perform the same roles”.

How edtech and data can set the stage for transformation in the SA education system

Leigh Anne Albert 13 Sep 2019

A crucial question is whether we, as leaders, thinkers and businesses, are going to remain a ‘reactive’ country, or applying our knowledge, insights and foresight to be proactive.

Being proactive means we will set and support the South African educational system to provide the correct foundation for the youngest of the population, the future workforce, future leaders and our future consumers with the correct skills to succeed.

#BizTrends2019: Youth marketing techniques to target the real SA youth market

Leigh Andrews 10 Jan 2019

Are we advancing our educational faculties in sync with the pace of change that is required?

Or are we denying the future of South Africa the opportunity to live a better life with secure employment, the ability to rectify the wrongs of our past and leave the legacy of adversity, inequality and poverty to continue its ripple effect into the future, for younger generations to solve?

To only hear in the words of Greta Thunberg's 'You did not act in time' speech directed at MPs for the 2019 UN Climate Action Summit: "My message is that we'll be watching you," as a challenge to leave our country better than we found it.
