

SAS launches free data analytics programme for higher education students

With continued high demand for data science talent, analytics, artificial intelligence and data management software and services company SAS has launched a new programme for higher education students to learn analytics skills and earn valuable certifications sought by employers.

[SAS Skill Builder for Students](#) is a free, global, 24/7 virtual learning portal that offers access to SAS software, e-learning and certifications as well as career advice and ways to connect with employers.

“It’s never been easier for students to learn SAS and apply those skills in a career they love,” said Lynn Letukas, senior director of global academic programmes and certifications at SAS. “SAS Skill Builder for Students highlights our continued commitment to growing the next generation of analytics experts and connecting employers with the talent they need.”

11 factors to the successful growth of an active e-learning culture

The path to a great analytics career

Last year, more than 143,000 job postings listed SAS as a desired skill, according to Emsi Burning Glass, an aggregator of labor market data. SAS Skill Builder for Students can help more students seize those jobs by providing access to:

- **Free cloud-based software:** SAS OnDemand for Academics and SAS Viya for Learners.
- **Free e-learning:** Courses in foundational skills like data literacy and point-and-click data analytics, programming, visual analytics and visual statistics, statistical analysis, predictive modeling and machine learning.
- **Certification pathways** to simplify the journey to data science certification and other valuable SAS certifications.
- **Exclusive certification exam discounts** for those who register.

- **Badges** that signal valuable skills to employers in areas such as data visualisation and machine learning.
- **Career resources** to inspire students and help them succeed. Students can explore what it means to be a data scientist and data analytics professional, how to set themselves apart and connect with employers offering work that taps into their passions.

Thriving in a data-driven world

SAS Skill Builder for Students incorporates data from a variety of industries to gain valuable and relevant experience. Students can also learn one of the most valuable skills for success in today's society and workplaces - data literacy. In a world awash in disinformation and misinformation, it is critical to be able to consume, interpret and understand data.

SAS Skill Builder for Students includes access to Data Literacy Essentials, a SAS course that introduces data basics and strategies for using and interrogating data, discovering meaning, making decisions and communicating data. The course follows the journeys of a concerned parent, a small business owner and a public health expert, who each use data to navigate and problem-solve through the pandemic.

Pearson SA bridges the learning gap with quality learning content

The course also focuses on the ethical challenges of working with data. Data ethics refers to how we seek out, interpret and present data responsibly, including the moral judgments we make when working with data. The course covers how biases influence the ways we interact with and communicate data and provides guidance on ways we can work with data more responsibly.

An academic email domain is required to access SAS Skill Builder for Students.
