

SLE showcases new projects in CT

SLE recently showcases its ALI vertical farm structure and HAIBO (Hitech Agricultural Initiative for a Beautiful World) app at the Southern Sun Cape Sun in Cape Town's CBD.

The sustainable vertical farming structure aims to address smallholder farmers' lack of access to decent housing, electricity, clean drinking water, and limited agricultural land access to farm in. While the app virtualises the agricultural supply chain for smallholder farmers, which allows them to trade safely and competitively as well as to access learning material that relates to their farming activities.
