

Two years of non-stop production

Issued by [Pyrotec](#)

26 Apr 2016

Engineered to save customers time and improve efficiency, the 9028 inkjet printer from Markem-Imaje, locally represented by Pyrotec PackMark, features an M6' ink circuit that is designed to be changed by machine operators in less than six minutes.

Thanks to the innovative and all-inclusive M6' ink circuit, production (for applications running up to 3,000 hours per year) can run non-stop for two years. Easy to change, the M6' can be clicked-in and clicked-out in less than six minutes without the use of special tools. What's more, the 9028's innovative cartridge system and associated inks – MEK-free and permanent – make set-up automatic and clean, optimising operators' time and overall production uptime.

With its straightforward fully stainless steel design and IP55 rating, the 9028 is ready to print in even the harshest environments just minutes after purchase.

The 9028 inkjet printer exceeds customers' expectations by printing up to four lines of print at speeds of up to 4.4m/s. Logos can be created directly on the operator/machine interface, and the printer offers an automatic font selection depending on the print speed and printhead/object distance. Additionally, Jet Speed Control guarantees marking quality.

When it comes to smart consumables, the 9028 – with its cutting-edge cartridge system design – offers advanced consumable management and a clean ink change. It is also easy to use and compatible with other Markem-Imaje printers. In addition to this, because of its accurate consumable level display and efficient replacement without stopping production, the 9028 offers customers more uptime.

Markem-Imaje's 9028 is designed to be run by production operators. It offers embedded online software for easy and efficient management, and codes can be quickly created and uploaded via a newly-designed user interface and USB connection.

To demonstrate how quick and easy it is to change the 9028's all-inclusive M6' ink circuit, Pyrotec PackMark has launched the first in a series of do-it-yourself videos on YouTube:
