

Tips for successful hang tab performance

Issued by [Pyrotec](#)

12 May 2017

Do-It® Hang Tabs have been designed to hang products on peg hooks and display strips - anywhere that consumers can see them. Unfortunately, sometimes, a hang tab fails to hold the product in place.

Here are a few tips to ensure maximum performance of your hang tabs:

- Ensure that the surface of your product is even and flat. An uneven surface can cause a reduced percentage of the adhesive to be in contact with the surface and increases the chances of the product falling off the hang tab.
- The optimal performance temperature range for the application and display of hang tabs is between 15°C-32°C. When hang tabs are applied and displayed outside of this temperature range the adhesive will not have maximum bonding strength.
- Generally, the back side of the product/package is the best location for attaching the hang tab to a package.
- Do not touch the adhesive of the hang tab as dust or particles on your fingers could affect the adhesive's stickiness.
