The latest report, published in [Food Review](#), is in response to [results published](#) by the Sefako Makgatho Health Sciences University in Pretoria towards the end of 2022. That report, issued on 16 November, noted bottled water was one of the fastest-growing commercial products in both developing and developed countries owing to the belief that it was safe and pure. And yet it said the water tested was anything but safe and pure.

In South Africa, the authors of the Sefako report wrote, sales of bottled water were driven by the perception that water supplied by the government might not be safe for human consumption. The study investigated concentrations of trace metals and the physico-chemical properties of bottled water bought from various supermarkets in Pretoria to determine health risks.
