

#BeautifulNews: This teenager installed a computer lab for students to dream in code

Classrooms just got a whole lot cooler. The Department of Basic Education recently announced that they're introducing coding to the South African curriculum. But not every school has access to computers. While some students are equipped with the knowledge to contribute to the country's technological growth, others lack the resources to study even the basics. The results of this dichotomy become more pronounced later in life. This was the experience for 17-year-old Nadine Maselesele. "I was surprised when I got to college and learnt that the learners did not know how to prepare a CV on a computer," she says. To boost their skills, Maselesele went back to her alma mater.
