

Interested in vaccine rollouts across Africa? Here's a map to guide you

By [Benjamin Kagina](#)

18 Mar 2021

Most developed countries are in the advanced stages of Covid-19 vaccination rollouts. But a large number of developing countries, including most across Africa, are still at the early stages, mainly due to a shortage of shots.

Covid-19 vaccination is slower on the African continent than in high income countries. Shutterstock

African countries are trying to overcome the shortfall by using a [multi-pronged approach](#) to secure vaccines. This includes sourcing them through:

- the [Covax facility](#). This is a global initiative aimed at equitable access to Covid-19 vaccines. It's led by global health organisations including Gavi, the vaccine alliance, the World Health Organisation, and the Coalition for Epidemic Preparedness Innovations;
- the Covid-19 African Vaccine Acquisition Task Team, which was established by the [African Union](#);
- bilateral agreements with the manufacturers, and
- donations from other countries.

To help you keep track of the progress of Covid-19 vaccine rollouts in African countries, we have developed a map that will be updated daily, showing how many people have been vaccinated across the continent.
